Some basics

- Inline vs Block

- Cascading (Selectors)

- How do you write and use style sheets?

Inline vs Block (level?)

- Some elements are considered inline (by default)
  span, em, i, a, b, strong, etc.

- Some elements are considered block (by default)
  div, p, article, etc.

- How can you tell? Or why should I care if you can change it? Semantics! Robots?

  - Inline elements appear inside a sentence on the same line

  - Block level elements appear
    <p>each</p>
    <p>on</p>
    <p>their own line</p>
